

Bruno de Oliveira Borges Filho

Full-Stack Software Engineer

Goiás, Brazil (Remote, GMT-3) | bborgesfilho33@gmail.com | +55 (64) 98103-9994

github.com/brunooborges | linkedin.com/in/brunooborges

PROFESSIONAL SUMMARY

Full-Stack Software Engineer specializing in NestJS, TypeScript, and Next.js. Proven track record architecting scalable, AI-powered product surfaces and high-concurrency financial backends, from real-time WebSocket trading systems to multi-tenant payment gateways. I own features end-to-end and ship clean, maintainable, well-tested code (SOLID, Clean Architecture, 90%+ coverage).

PROFESSIONAL EXPERIENCE

Sysdev Techstrategy & Consulting LTDA | 03/2024 – 10/2026 · Remote

Full-Stack Software Engineer: hired as a Frontend Developer; grew into Full-Stack through performance, consistent delivery and technical growth

Gazer: AI-Powered Prediction Market Analysis & Trading Platform (Polymarket) | 06/2025 – 10/2026 · Remote

Full-Stack Software Engineer, Mid-level (Solo / Hands-on)

- **Architectural ownership:** Built a SaaS platform end-to-end with 21-module NestJS backend and a 182-component Next.js 16 / React 19 dashboard spanning AI trading directives, market mirroring, trading, analytics, and billing.
- **Real-time data systems:** Engineered a Socket.IO gateway streaming live prices and order-book snapshots/deltas with auto-reconnect and latency monitoring, achieving <100ms UI updates and reducing server overhead by ~40%.
- **AI data pipelines:** Developed asynchronous ingestion with Bull/Redis queues (retries + backoff) to upsert thousands of Polymarket markets and AI directives concurrently while respecting external API rate limits.
- **Multi-provider billing engine:** Implemented a provider-agnostic engine integrating Stripe and Hotmart that automated the full subscription lifecycle (checkout, renewals, plan changes, cancellations, refunds) and RBAC, reducing manual billing intervention by ~50%.
- **Access control & reliability:** Designed a four-tier content-gating system enforced server-side, with JWT auth, refresh-token rotation, API-key guards, and global exception handling.
- **Analytics:** Delivered user and admin dashboards backed by Redis-cached queries and Recharts, plus a custodial trading bridge to the payment gateway and full i18n (pt/en/es).
- **Quality:** Achieved 90%+ test coverage with Jest and SWC across unit and integration suites within a high-velocity deployment cycle.

BR.Money: Multi-Tenant B2B Payment Gateway (PIX & Cryptocurrency) | 03/2024 – 10/2026 · Remote

Full-Stack Software Engineer, Junior

- **Scope evolution:** Joined as a Frontend Developer and grew into full-stack ownership through consistent delivery and technical growth, taking on backend API architecture and integrations.
- **Multi-tenant architecture:** Architected a 33-module NestJS/Prisma backend with strict per-tenant isolation across middleware, guards, and repositories, plus per-currency tenant and customer wallets with balance + locked-balance accounting.
- **Payment integrations:** Unified multiple PIX providers and crypto behind one gateway with deposits, withdrawals, QR codes, and currency conversion and an automated status-polling cron jobs.
- **Custodial trading engine:** Built encrypted wallets (scrypt + AES-256-CBC) and CLOB order execution via a concurrency-1 Bull queue, backed by an immutable virtual ledger auditing every fund lock, fill, refund, and redeem.
- **Data integrity:** Implemented real-time order reconciliation over authenticated WebSocket + cron, auditing on-chain master-wallet balances against summed user positions, with all financial math via Decimal.js to eliminate drift.
- **Secure infrastructure:** Secured B2B environments with API-key middleware, and HMAC signing; delivered reliable webhook delivery through a postback queue (5 retries, exponential backoff) with full audit logging.
- **Product surface:** Added Stripe card issuance, payment links, and tenant-to-tenant transfers, and built a high-performance Next.js admin dashboard (TanStack Query, Zod) that streamlined merchant onboarding by ~70%.

TECHNICAL SKILLS

Backend: NestJS, Node.js, TypeScript, Prisma ORM, PostgreSQL (schema design & optimization), REST API design, Multi-tenancy, Bull/Redis queues, Socket.IO, Webhooks, JWT/Passport.js, Swagger, Microservices

Frontend: Next.js 16, React 19, TypeScript, Tailwind CSS, shadcn/ui, Mantine UI, TanStack Query, TanStack Table, Zustand, Zod, NextAuth.js, Recharts, React Testing Library, i18n

AI & Automation: OpenAI API, Prompt Engineering, n8n Workflow Automation, Claude Code

DevOps & Cloud: AWS (Lambda, S3, SQS), Docker & Docker Compose, CI/CD (GitHub Actions), Cron Jobs (NestJS Schedule), NewRelic APM

Security: OWASP practices, HMAC signing, AES-256 / scrypt encryption, RBAC, API-key management

Testing: Jest (unit & integration), TDD, Mocking (jest-mock-extended), coverage tooling, SWC

Principles: Clean Code, SOLID, Design Patterns, Clean/Layered Architecture, End-to-End Ownership

PROJECTS

Foodiary: Serverless AI Diet Analyst | 2025

Full-stack, AWS-native app (Lambda, S3, SQS, API Gateway) integrating the OpenAI API for real-time nutritional analysis, with Drizzle ORM + PostgreSQL, JWT auth, and a React Native client. Clean Architecture, serverless-first, CI/CD.

FinCheck: Personal Finance Manager | 2024

NestJS + Prisma API with a React, React Query, and Zod frontend, JWT authentication, and interactive charts for tracking bank accounts, income, and expenses.

EDUCATION

Associate Degree in Systems Analysis and Development | 05/2025 – Present

Faculdade Única

Bachelor of Civil Engineering | 2014 – 2019

Pontifícia Universidade Católica de Goiás (PUC-GO)

COURSES & LANGUAGES

Programming: JStack (2023–2025), B7Web (2023–2024): advanced full-stack Node.js, NestJS, and React programming.

Languages: Portuguese (Native), English (Fluent, Skill Idiomias in-person course).
